

# Improving Surgical Safety For Dental Extractions At Porth DTU

A Quality Improvement Project

By Alexandra Rawlins

DCT2 Oral Surgery

Supervisor: Mr K. Smart

# Background

- + Although wrong site tooth extraction is no longer classed as a never event it is a distressing experience and is avoidable.
- + The Royal College of Surgeons of England recommends that LocSSIPs should be used for dental extractions to reduce the risk of wrong site surgery.
- + The GDC and the CQC both support this.

2019-2020 there were 8 claims for wrong site dental surgery in secondary care in England, with a total cost of **£102,000** including **£43,000** in damages (NHS Resolutions, 2021)

# What is a LocSSIP and where did they develop from?

## Locally derived Safety Standards for Invasive Procedures (LocSSIP)

- + 2007-2008 Safer Surgery Saves Lives programme introduced the 19 WHO Surgical Safety Checklist (Haynes et al., 2009).
    - o 47% reduction in deaths, 36% in complications
  - + 2015 NHS England produced 'National Safety Standards for Invasive Procedures (NatSSIPs)'
    - o Used to produce 'Local Safety Standards for Invasive Procedures' (LocSSIPs) specific to site and treatment (NHS England, 2015).
- 

# Porth DTU LocSSIP for Dental Extraction

Wrong site dental extractions have previously occurred at Porth DTU.

- The site LocSSIP was introduced as a result of a wrong site extraction in 2019

## *Key Points:*

1. Patient identity checked
  2. Treatment plan / Radiographs / Patient mouth all checked and matching
  3. Plan and radiographs displayed
  4. Patient confirms tooth and plan
  5. Operator and assistant verbally agree correct tooth prior to application of force
  6. Use of LocSSIP documented
- 

# Data Gathering Process

- Direct assessment of appointments was not possible due to time involved in observing every case for 3+ months
- Indirect approach taken – possibility of inaccurate records acknowledged

1

Access R4

2

Identify sessions  
where MOS  
service provided

3

Check which  
appointments  
included  
extraction(s)

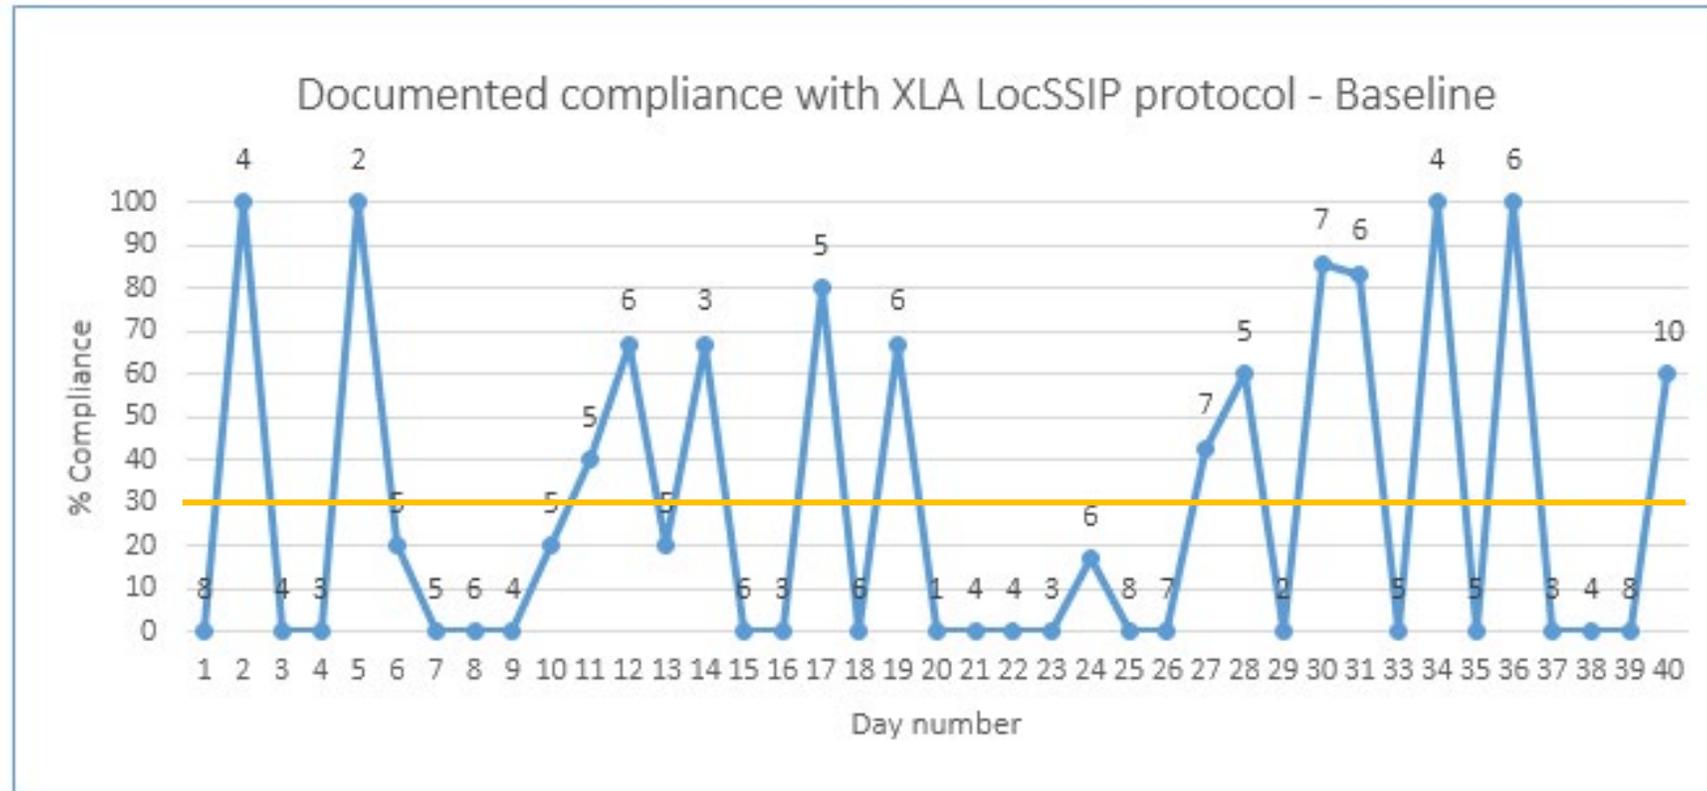

4

Look for  
evidence that  
XLA LocSSIP  
protocol used

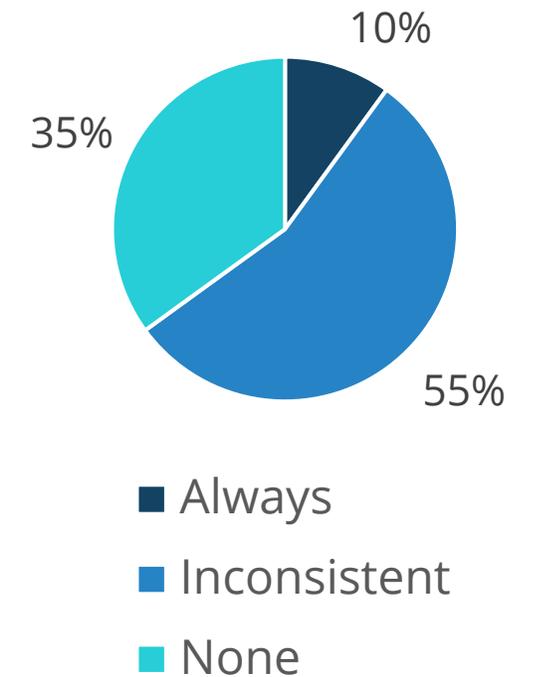

5

Record whether  
evidence was  
found

# Baseline Data

Documented Compliance Per Session

- + Total mean compliance over 196 extraction cases was **30.1%**
- + High variation in compliance per session (range 0-100%)

# Problem Statement & Aim

## Problem

- + Only **30.1%** of appointment notes from MOS dental extractions contain evidence that the LocSSIP protocol has been appropriately followed.
- + This suggests that the protocol is not being routinely followed, as documenting use is one of the stages

## Project Aim

- + Increase the percentage of dental extractions carried out following the LocSSIP protocol including documenting use in the patient's notes **from 30.1% to 90.0%** by June 2022.

# Inclusion & Exclusion Criteria

## Inclusion:

- + **What:** Digital patient records on R4
- + **Where:** Porth Dental Teaching Unit (PDTU)
- + **Who:** MOS service patients only
- + **When:**
  - 40 sequential treatment sessions (baseline)
  - Further 20 sessions following measure 1
  - Further 20 sessions following measure 2

## Exclusion:

- + Coronectomy cases not included as not stated in LocSSIP protocol
- + Multiple extractions in single appointment treated as one

## Project Aim

Increase percentage of dental extractions carried out following the LocSSIP protocol for dental extraction including evidence documented in the patient's notes **from 30.1% to 90.0%** by April 2022.

## Primary Driver

Operator has not followed the LocSSIP protocol

Operator did not document it afterwards

## Secondary Driver

They didn't know they should

It interrupts operator flow

Operator feels awkward stating tooth

Feeling it is of no benefit

Forgetting

Short on time

A second person writes the notes

Unsure how to document it

## Intervention

Provide guidance

Poster in surgery

Pop-up

More practice

More practice

Observing others

Provide guidance

Discussion with staff

Poster in surgery

Pop-up

Longer appointments

Simplify template

Involve whole MOS team

Provide guidance

More practice

**1.  
Provide  
Guidance**

**2.  
Prompt  
Memory**

**3.  
More Practice**

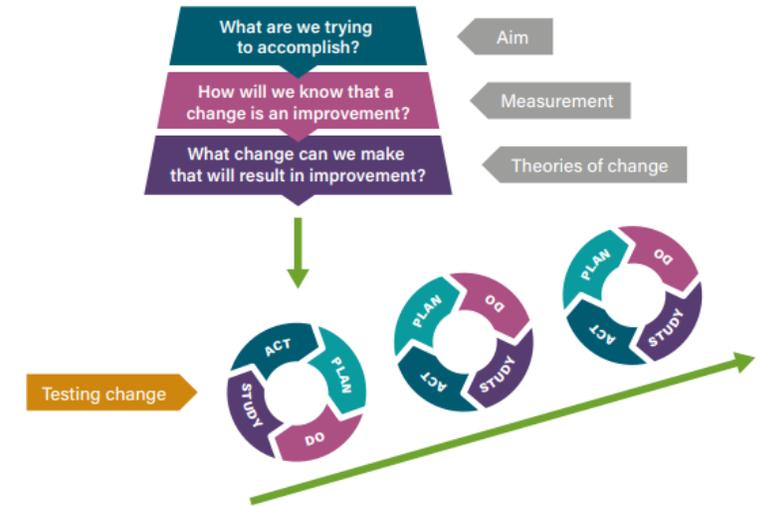

# PDSA Cycle 1: Plan

1. Provide Porth MOS staff with a summary of the LocSSIP
2. Discuss with staff why the LocSSIP is important
3. Provide guidance on appropriate documentation

## + Considerations:

- Need to reach all staff involved
- Face to face session difficult as staff working different days, risk of Covid-19
- Not intruding into staff personal time

## The Model for Improvement

# PDSA Cycle 1: Do

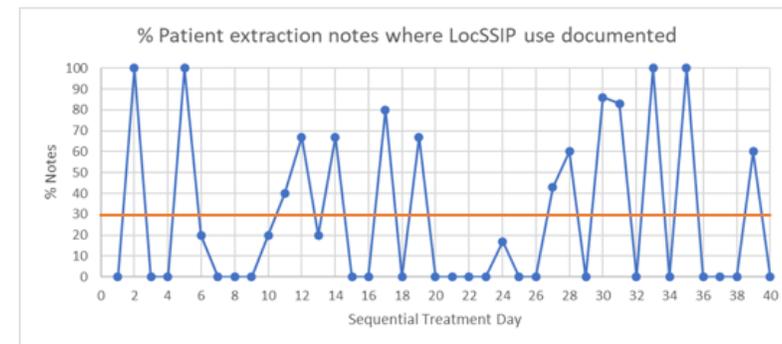

1. Email sent to all members of staff who routinely operate for the Minor Oral Surgery (MOS) Service at Porth DTU
2. Follow up informal conversations one-on-one over the following week, where staff members had queries

Dear all,

I wanted to keep you updated on the results of my QIP. I have been looking at use of the Local Safety Standards for Invasive Procedures (LocSSIP) protocol for dental extractions at Porth.

As it was impractical to look at whether the protocol is being followed directly, I have been looking through past appointment notes for any record that the protocol has been used, either via the R4 template or as text.

I have attached a run chart of the baseline results below. The orange line represents the mean average to date (30%).

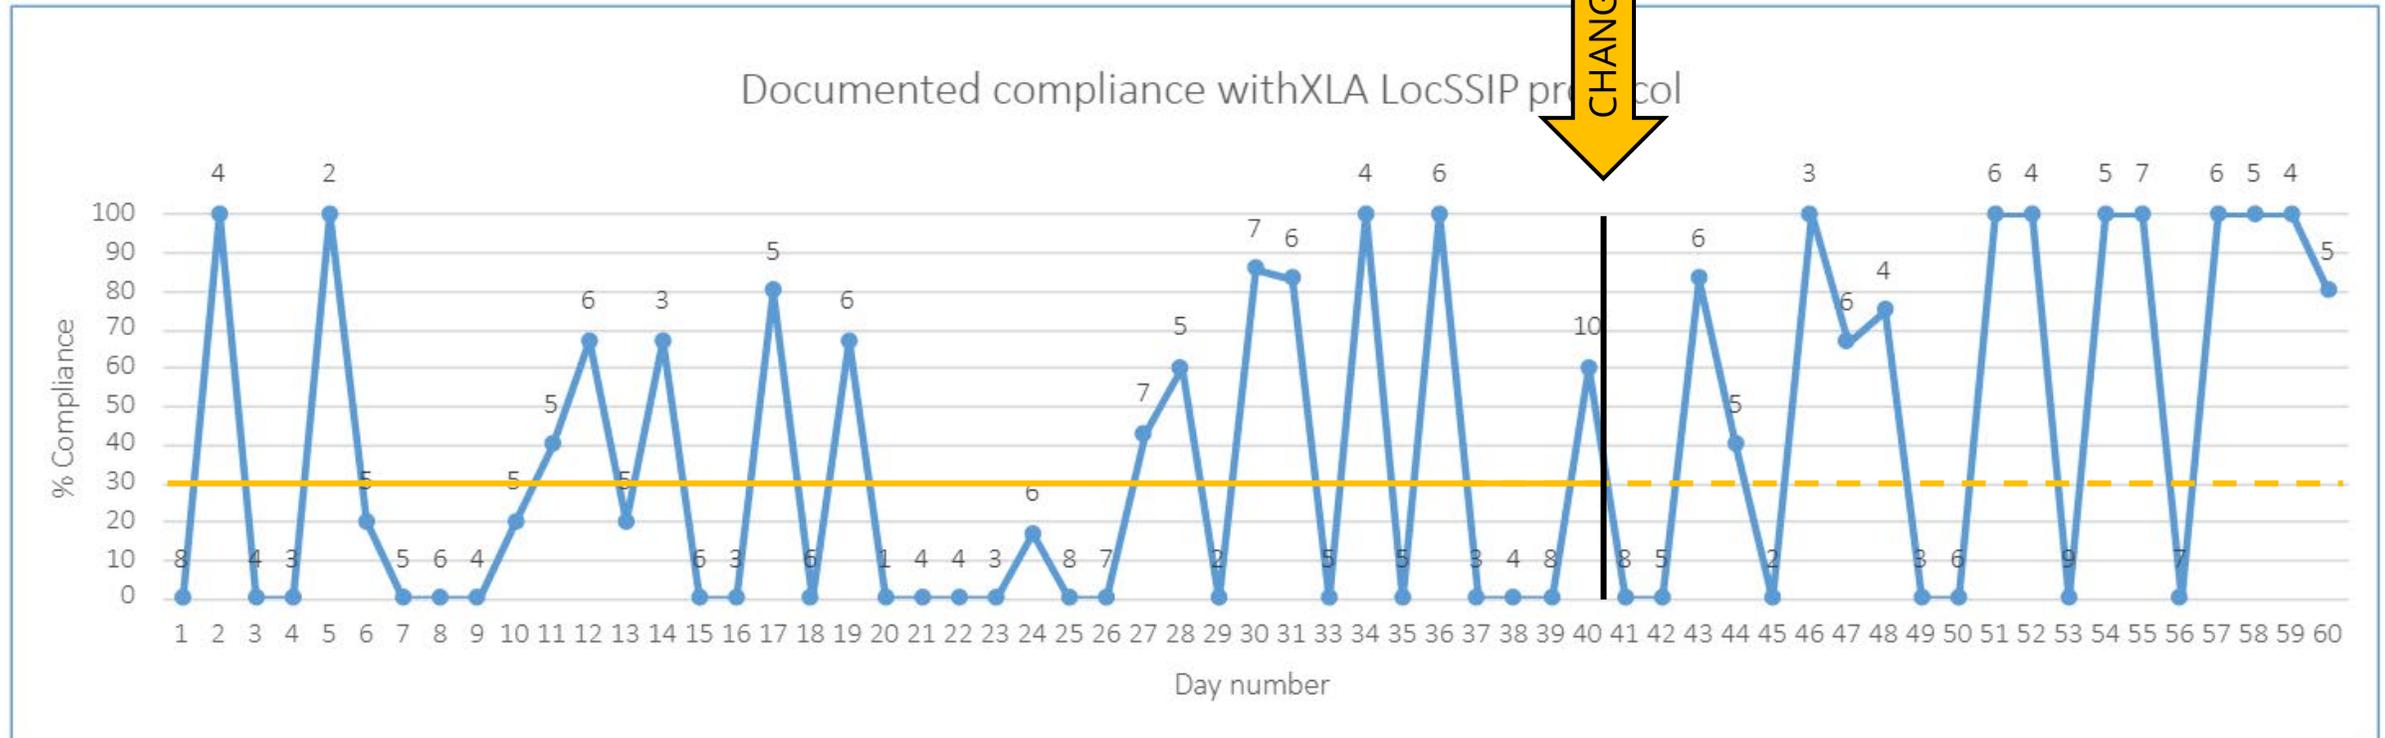

As the graph shows significant variability, I thought I'd take a minute to explain what the LocSSIP protocol is and why it is important:

# PDSA Cycle 1: Study

+ Overall compliance increased from **30.1%** to **54.7%** but did not reach the target of 90.0%.

| Consistency of LocSSIP use /day | Baseline | Following Measure |
|---------------------------------|----------|-------------------|
| Always used                     | 10%      | <b>40%</b>        |
| Inconsistent                    | 55%      | <b>25%</b>        |
| Never used                      | 35%      | 35%               |

# PDSA Cycle 1: Act

## Conclusion:

- + Providing guidance to staff was not adequate to achieve overall compliance to desired level (90.0%), but did generate improvement in some individuals (54.7%, previously 30.1%).

## Actions:

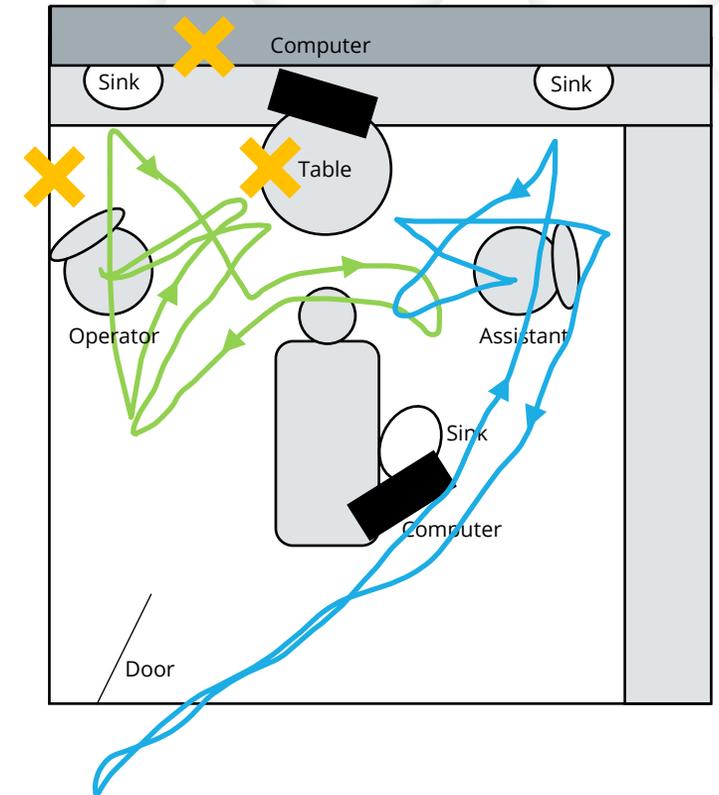

- + Continue to provide guidance to any future new staff members
- + Begin a second PDSA cycle

# PDSA Cycle 2: Plan

1. Introduce new checklist poster to prompt memory
2. Reassess data after further 20 sessions
3. Seek feedback from staff on poster design

## Considerations:

- + Must be displayed in easily reachable location
- + Must be wipe clean
- + Must be visible when operating
- + Should be simple and draw the eye

Flow around surgery during a typical extraction:

- Path of operator
- Path of assistant
- X Possible poster locations for maximum accessibility by operator during treatment planning and extraction

# PDSA Cycle 2: Do

**GIG CYMRU NHS WALES** MOS Dental Extraction Checklist

|                 |             |       |
|-----------------|-------------|-------|
| Name            |             |       |
| [ ]             |             |       |
| DOB             |             |       |
| [ ] / [ ] / [ ] |             |       |
| Procedure       |             |       |
| XLA             | Coronectomy | Other |
| [ ]             | [ ]         | [ ]   |
| [ ]             | [ ]         | [ ]   |

**PLAN**

- Check patient ID
- Patient confirms tooth
- Confirm radiographs match clinical picture

**PAUSE**

- Operator verbally states tooth
- Assistant verbally confirms tooth

**PROCEED**

- Record use of LocSSIP in notes

On applying first instrument

- + Poster provides visible prompt to complete checklist, with area to tick as each step is completed
- + Whiteboard pen and cleaning wipes are stored nearby

# PDSA Cycle 2: Study

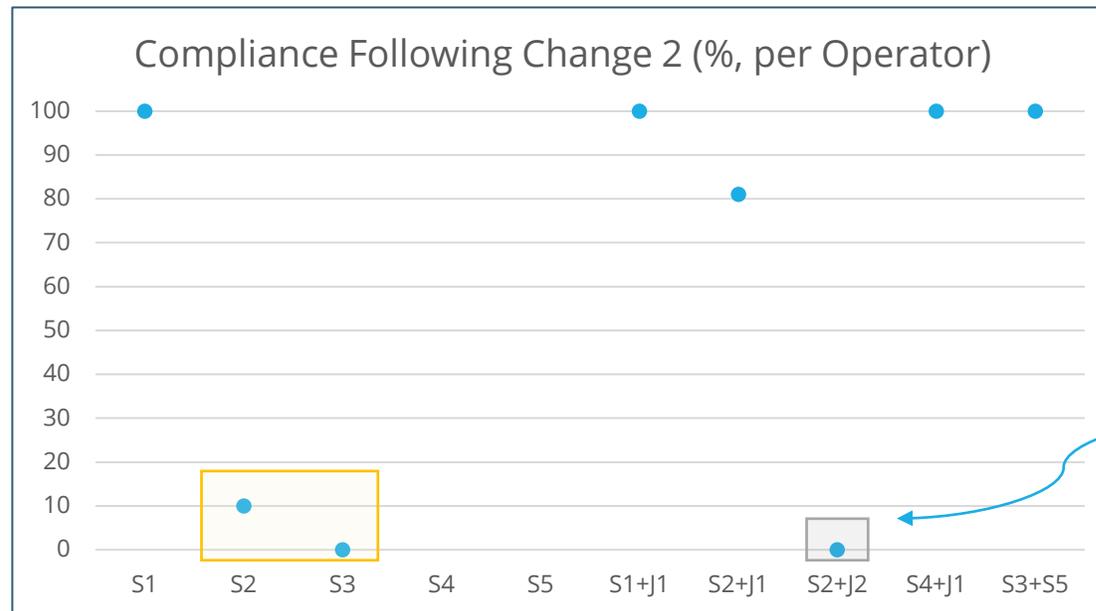

- + Following Change 2 overall protocol compliance increased from 54.7% to 68.0% but did not reach the target of 90.0%.
- + There has been a continuous run of 6 data points above the baseline mean indicating a non-random shift.
- + Cycle 2 showed the most polarised results yet (Non 0 or 100 scores = 2 / 20)

| Consistency of LocSSIP use /day | Baseline | Following Change 1 | Following Change 2 |
|---------------------------------|----------|--------------------|--------------------|
| Always used                     | 10%      | 40%                | <b>60%</b>         |
| Inconsistent                    | 55%      | 25%                | <b>10%</b>         |
| Never used                      | 35%      | 35%                | <b>30%</b>         |

# PDSA Cycle 2: Study

- + Some operators (S2, S3) fall consistently below the group for compliance with LocSSIP
- + This appears to be particularly when no junior present
- + Possible area for further study in future.

Anomalous point -  
one off session

# PDSA Cycle 2: Act

## Results:

- + Moderate improvement from Cycle 1 (68% previously 54.7%) building on previous improvement (baseline period 30.1%), but failing to reach the target of 90.0%.
- + A continuous run of 6 data points above the baseline mean indicating a non-random shift from the baseline.
- + Polarisation of results in Cycle 2 (Scores 1-99% = 2/20) suggests operators behaving more consistently.

## Actions:

- + Seek feedback from staff on the changes implemented so far (Adapt poster if necessary)
- + Seek insight from staff into the root causes of persistently low compliance rates amongst some operators

# Plan: Staff Survey

- + Google sheets e-Form emailed to Porth MOS staff
- + Hard copies also available (results then digitalised)
- + Results kept anonymous
- + 6 out of 8 members of Porth MOS team responded

I've invited you to fill out a form:

[Porth LocSSIP Protocol Survey & Feedback](#)

Please mark the answers you feel best apply. A summary of the LocSSIP for dental extractions and a photo of the new poster are provided below for reference.

Your feedback / suggestions for improvement are much appreciated!

**Summary of the LocSSIP protocol for Porth**

*LocSSIP for Dental Extraction at Porth - Key Points:*

1. Patient's identity checked
2. Treatment plan / Radiographs / Patient's mouth all checked and matching
3. Plan and radiographs displayed
4. Patient confirms tooth and plan
5. Operator and assistant verbally state tooth name prior to application of force
6. Use of LocSSIP documented in notes

How often do you feel you follow the LocSSIP for dental extractions at Porth? \*

Every extraction  
 Most  
 Some  
 Never

How often do you document in the notes that you have followed it? \*

Every time  
 Most  
 Some

**The new LocSSIP poster**

The screenshot shows a digital checklist titled 'MOS Dental Extraction Checklist'. It is divided into three main sections: 'PLAN', 'EXECUTE', and 'FINISHED'. The 'PLAN' section includes checkboxes for 'Check patient ID', 'Patient confirms tooth', and 'Confirm radiographs match clinical picture'. The 'EXECUTE' section includes checkboxes for 'Operator verbally states tooth', 'Assistant verbally confirms tooth', and 'Record use of LocSSIP in notes'. The 'FINISHED' section has a checkbox for 'Record use of LocSSIP in notes'. There are also buttons for 'PLAN', 'EXECUTE', and 'FINISHED'. To the right of the screenshot is a photograph of the physical poster mounted on a wall in a clinical setting.

Do you have any feedback / improvement suggestions for the LocSSIP poster? \*

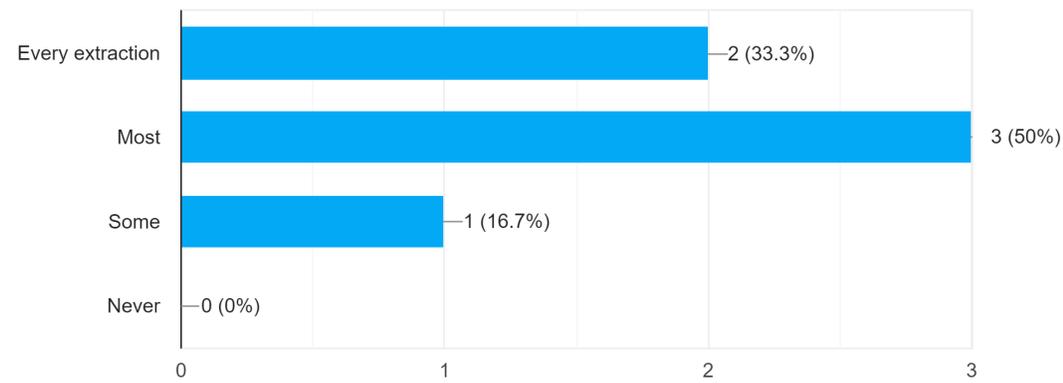

# Study: Results of staff survey

Staff were asked:

1. How often do you feel you **follow** the LocSSIP for extractions at Porth?

How often do you feel you follow the LocSSIP for dental extractions at Porth?

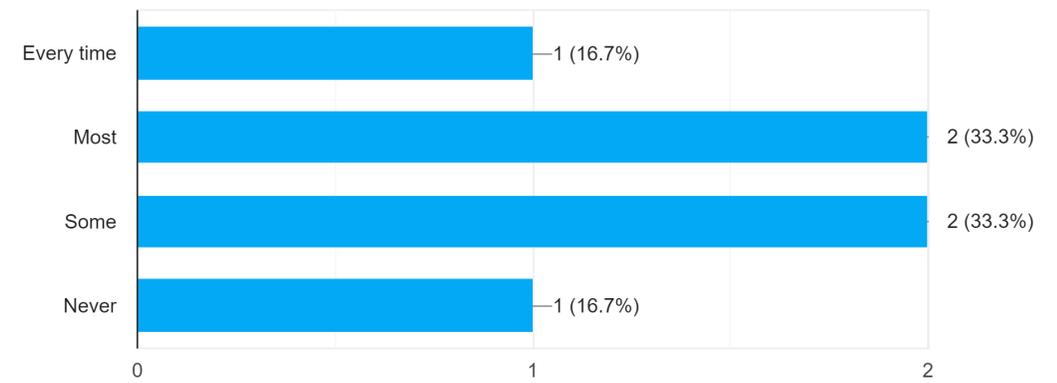

6 responses

2. How often do you **document** in the notes that you have followed it?

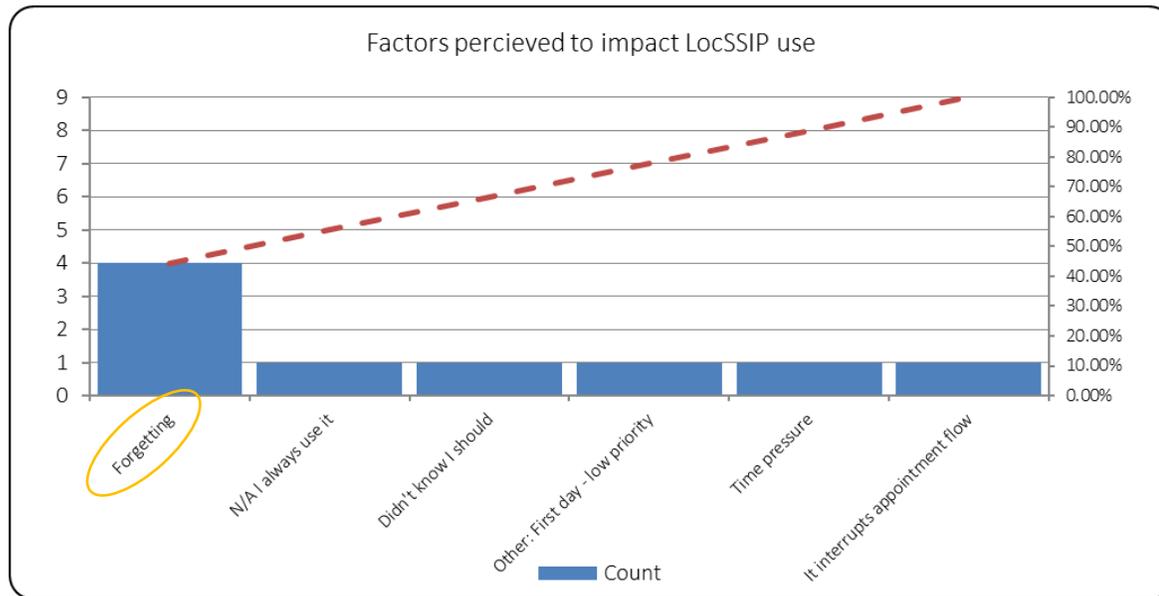

How often do you document in the notes that you have followed it?

6 responses

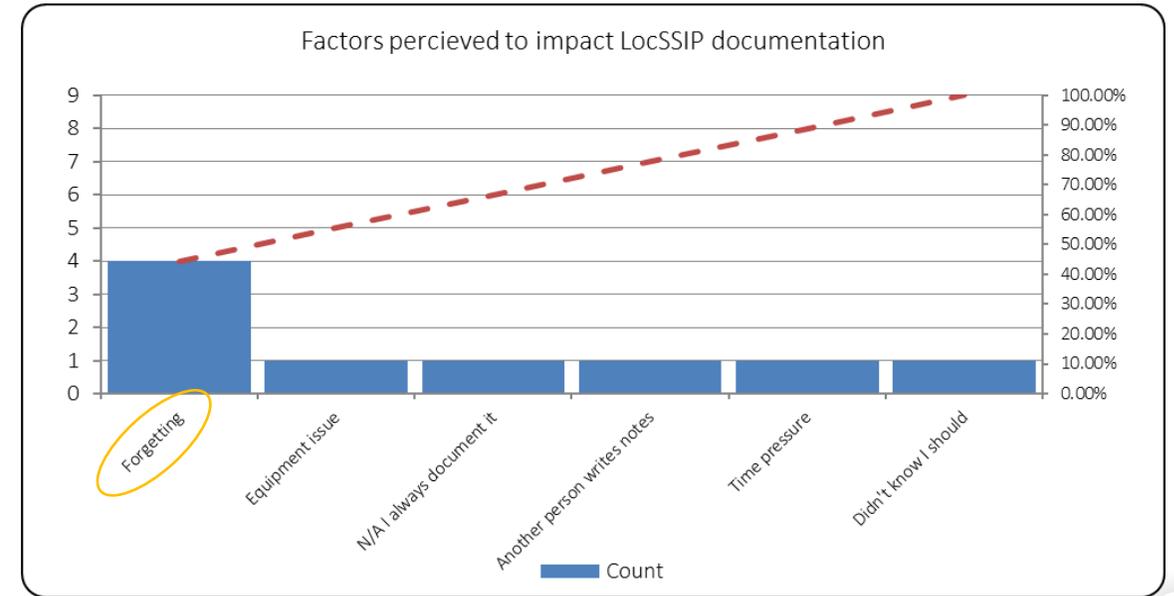

# Study: Results of staff survey

3. What factors stop you from **following** the LocSSIP all the time?

4. What factors stop you from **documenting** whether you used it all the time?

# Study: Poster Feedback

5. Do you have any feedback / improvement suggestions for the LocSSIP poster?

Do you have any feedback / improvement suggestions for the LocSSIP poster?

6 responses

It would be better if there was more space to write the patient's name

Really useful

Name box too small

Whole poster should be larger

Sorry! I'm rubbish I will improve

-

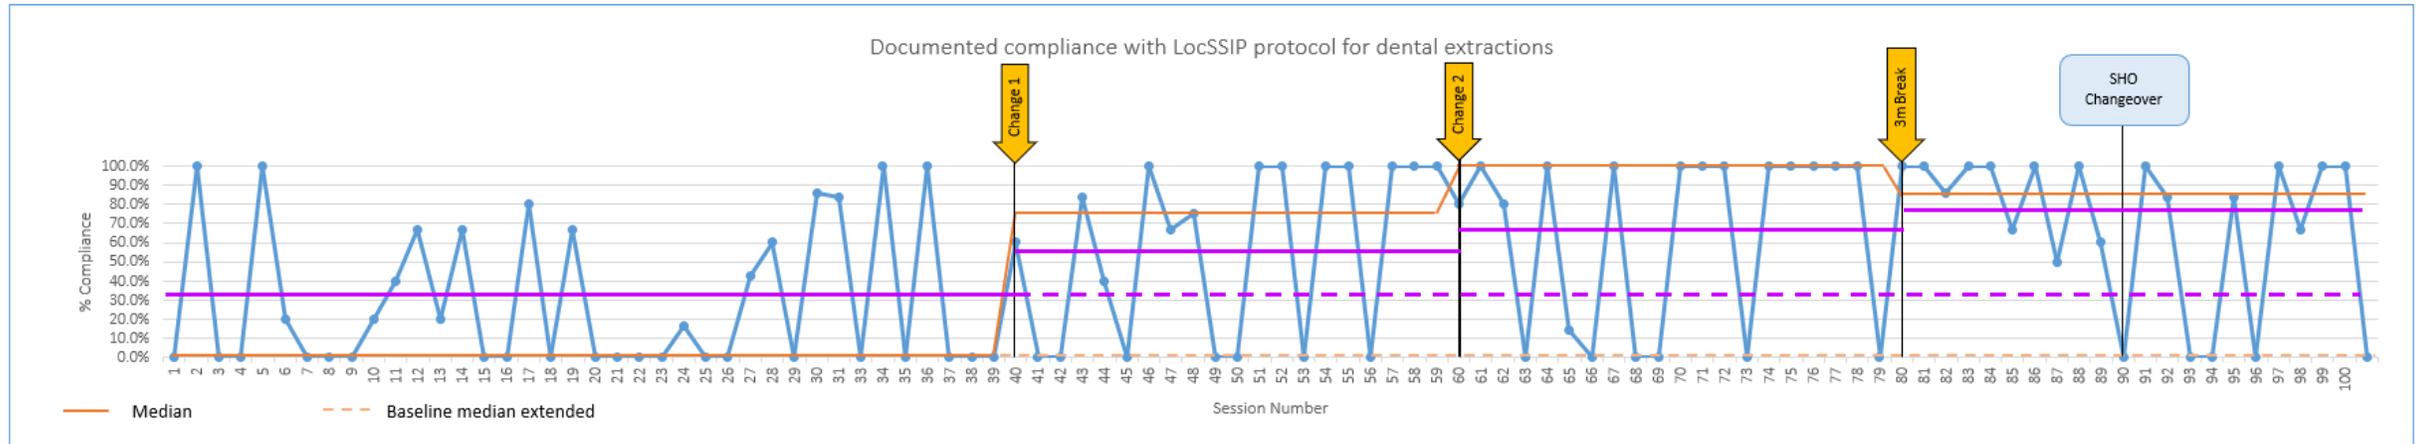

The aid memoire poster looks sensible and helpful. My failing to fill out the LocSSIP is forgetfulness. I am doing the checks, I just don't unfaithfully document this, sorry!

No, the design is very clear and easy to understand

*Additional ad-hoc verbal feedback:*

- + Poster too far away for nurse to reach
- + Pen smudging on to wall
- + Nib on pen is too broad so running out of space for patient's name
- + Pen frequently lost

# Stability of change: 3 Month Review

- + Total mean compliance increased from **68.0%** to **77.4%**
- + This is a fantastic result and demonstrates the change is self-sustaining
- + However, consistency within a session did drop slightly..
- + 90% target not yet met so important we keep going!

| Mean LocSSIP compliance | Baseline | Following Change 1 | Following Change 2 | 3 Month Review |
|-------------------------|----------|--------------------|--------------------|----------------|
| Always used             | 30.1     | 54.7%              | 68.0%              | <b>77.4%</b>   |

| Consistency of LocSSIP use /day | Baseline | Following Change 1 | Following Change 2 | 3 Month Review |
|---------------------------------|----------|--------------------|--------------------|----------------|
| Always used                     | 10%      | 40%                | 60%                | <b>45%</b>     |
| Inconsistent                    | 55%      | 25%                | 10%                | <b>35%</b>     |
| Never used                      | 35%      | 35%                | 30%                | <b>20%</b>     |

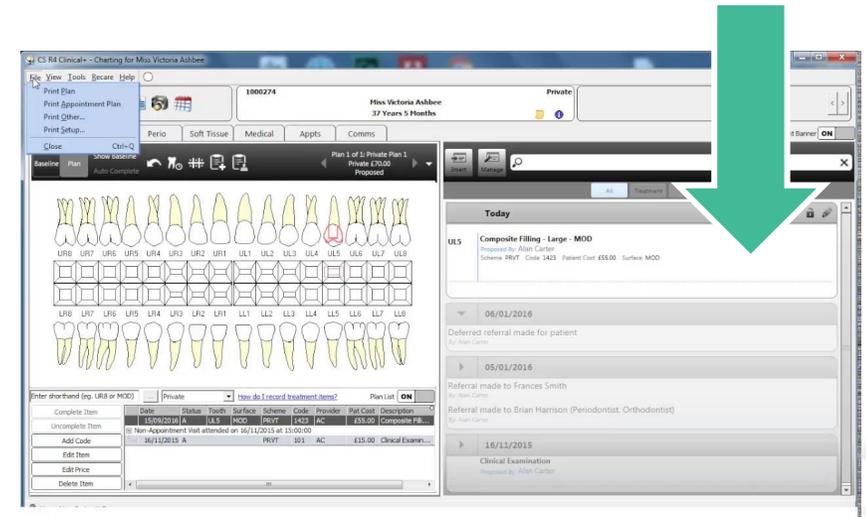

# Future Action Plan

- + Continue providing information on LocSSIP to new staff (Adopt)
- + Update poster to reflect feedback (Adapt)
  - Larger size A3 -> A2
  - Move on to operator whiteboard
  - More text space for patient name
  - Pen attached on string (with smaller nib)
- + (Present at audit)
  - So new staff understand reasons for LocSSIP
  - So all staff have a gentle reminder!
- + Discussion of next steps.....

# Next steps... for discussion!

Provisional plan:

- + Change trigger words so that auto-generated LocSSIP template will be added to all MOS XLA notes.....
- + R4 IT team can do this for us but need to know the 'trigger'
  - o Needs to be specific to MOS to not disrupt DFTs / other users
  - o Needs to be something everyone types in notes...
- + Possible suggestions:
  - o "haem" ... ?

# Project Reflection

## Strengths:

- + Addresses key safety issue which has previously led to a claim against NHS
- + Large size of baseline data (40 sessions) to compare results to
- + Continuous data gathering for full picture (no gaps between data periods)
- + Team involvement throughout project

## Opportunities:

- + Other sites (RGH, PCH) for comparison
- + New staff arriving – can train good habits early

## Weaknesses:

- + Unable to observe cases directly
  - Possibility for over-reporting – either due to poor operator recollection or inaccurate notes
  - Possibility for under reporting if protocol followed up to the extraction but not subsequently documented
- + Failure to achieve target of 90% compliance
  - An investigation is currently in progress to identify the contributing factors
- + Not surveying staff members earlier in project

## Threats:

- + Staff changeover soon – will the improvement be sustainable?

# Conclusion

- + This quality improvement project has led to an increase in the documented use of the LocSSIP protocol for extractions **from 30.1% to 68.0%** over changes 1 and 2.
- + Improvement was maintained 3 months' after the end of the original project, and overall compliance had actually increased to **77.4%** overall.
- + However, the improvement still falls short of the project target of 90% compliance.
- + A future change is planned – likely to involve R4 auto-templates.
- + Results would be more reliable if staff behaviour could be assessed directly.

# Personal Learning Points

1. Motivating change is hard!
  - Encouraging behaviour change is challenging when the people with low compliance are senior to you
2. Careful planning is important to project success
  - No site access after 5:30pm, no remote access to data, not crossing paths with other team members
3. How to draw a run chart / pareto chart properly
  - (And how to use a macro)

Q & A

## Why is wrong site tooth extraction not a never event (any more)?

- + Since 1<sup>st</sup> April 2021 NHS England Improvement no longer considers wrong site dental extraction a 'never event'
- + A Never Event is an incident with *“the potential to cause serious patient harm or death”* and that is *“wholly preventable where guidance or safety recommendations that provide strong systemic protective barriers are available at a national level and have been implemented”* – NHS England
- + This isn't because it's somehow more acceptable, but because *“the national guidance in relation to tooth extraction does not provide the strong systemic barriers necessary to meet the definition of a never event.”* - BDA

# What are your responsibilities if a wrong site extraction happens?

- + You have a duty of candour to tell the patient
- + You should offer a full apology and explain the consequences
- + You should direct them to the complaints procedure
- + You must inform the practice manager / head of department
- + An investigation should take place (including root cause analysis) and any failings addressed
- + Your indemnity should be notified
- + Must be reported as a Serious Incident
- + **Reporting:**
  - NHS contractors should report to Health Board Dental Contract Officer
  - Private practices report to Health Care Inspectorate Wales
  - **Secondary care should report electronically via SI pathway to the Improving Patient Safety Team at the Assembly Government within 24h**

# What is the guidance in Wales on dental extraction risk management?

- + HEIW Overview of mouthcare pre-extraction checklist (English and Welsh)
- + Welsh Health Circular – Never Events List and Assurance Review Process
- + NHS Wales Putting Things Right – Guidance on the reporting and handling of serious incidents and other patient related concerns
- + (Guidelines from British Orthodontic Society)
